TEAM REPORT · OCTOBER 2026 · 18 RESPONSES

sample report · fictional responses

The Danger Zone

Company position · internal benchmark from 18 responses across Sales, Marketing, Ops / RevOps and Exec

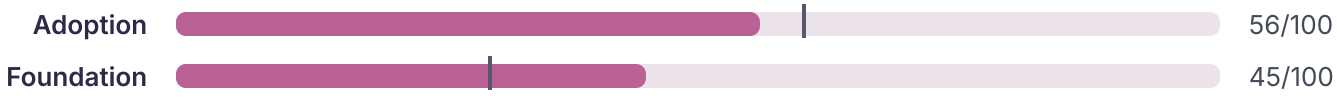

48/100

Alignment score — how much this team agrees with itself (typical team: 68)

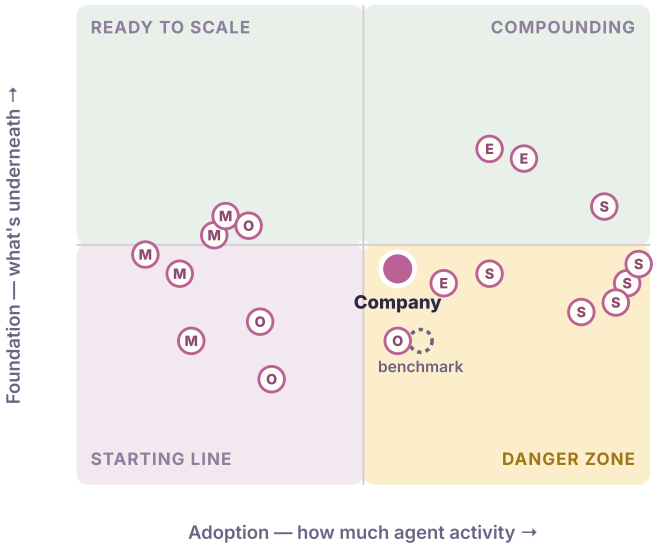

70 pts

Reality gap — widest between teams, Sales vs. Marketing (typical: 14)

The org disagrees about itself. Sales is deep into agents; Marketing has barely started; Ops is holding the foundation together by hand; the exec team believes all of it is further along than it is. Before fixing the foundation, get one shared picture of it.

18 views of the same company

Where the dots landed

7 **in The Danger Zone**
Most of Sales, plus one Ops and one Exec view — adoption running ahead of the foundation.

5 **in The Starting Line**
Most of Marketing and Ops — little agent activity, little groundwork under it.

3 **in Compounding**
Two of three Exec responses and one seller see both a strong foundation and real adoption.

3 **in Ready to Scale**
Three responses describe a stronger foundation than the rest of the company sees.

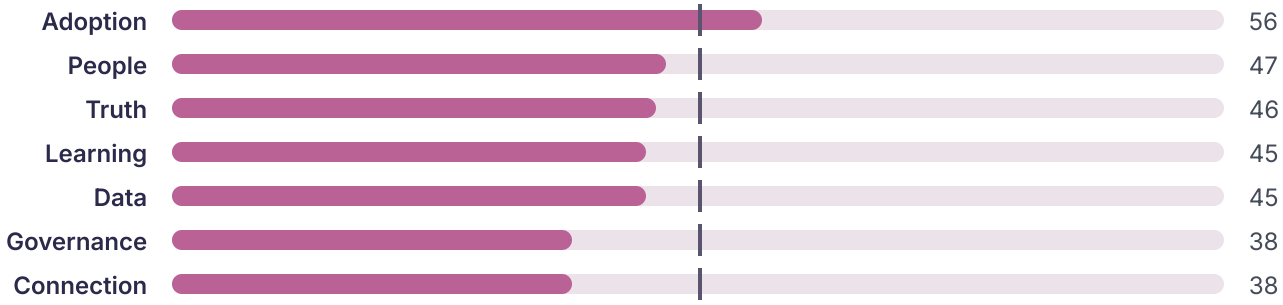

Solid dot = company · lettered dots = individuals by role · dashed ring = external benchmark · tick marks on bars = external benchmark

Internal vs. external, role by role

GROUP	N	ADOPTION	FOUNDATION	QUADRANT
Company (internal)	**18**	**56**	**45**	**The Danger Zone**
Sales	6	90	44	The Danger Zone
Marketing	5	20	46	The Starting Line
Ops / RevOps	4	38	35	The Starting Line
Exec	3	71	60	Compounding
External benchmark	—	*60*	*30*	*The Danger Zone*

Dimension by dimension

Company score per dimension, 0–100. The tick is the midline of the map.

The same company, seen from four seats

	Company	Sales	Marketing	Ops / RevOps	Exec
Adoption	56	90	20	38	71
Truth	46	55	38	18	78
Connection	38	52	25	10	72
Data	45	50	40	22	74
Governance	38	42	30	12	78
Learning	45	48	44	20	72
People	47	45	47	26	80

Where the team disagrees

The statements with the widest spread across individual answers, shown as the actual split — usually the most valuable ten minutes of the session. Disagreement here isn't error; it's information about who can see what.

1. Written rules say what can go to a customer without human review — and in the past quarter those rules actually stopped or changed something.

Answers span the full range — someone sees a reality someone else doesn't.
Leadership and most of Sales believe the rules exist. The people who would enforce them say no.

2. AI agents or assistants touch our GTM work every week — research, outreach drafts, call notes, reporting.

Answers span the full range — someone sees a reality someone else doesn't.
Sales lives in it daily. Marketing has barely started. Same tools, same budget.

3. One named senior leader owns how AI changes our GTM, and they reported progress to the exec team this quarter.

Answers span the full range — someone sees a reality someone else doesn't.
Someone owns it. Most people below the exec team can't name who.

Not really · Somewhat · Definitely

Counts of people per answer — individual answers are never shown with names or roles.

Where the team agrees — the clearest signals

16 / 18	**Not really:** what we learn from won and lost deals changes a real asset within weeks	Learning doesn't compound. Every deal teaches something; nothing records it.
15 / 18	**Not really:** ICP, deal stages and core messaging live in one current document	No single source of truth for any agent — or any new hire — to be grounded in.
14 / 18	**Definitely:** AI produces finished work in at least one GTM function	Adoption is real. The gap is the edit rate on what ships, not the activity.
13 / 18	**Not really:** each integration an agent uses is wired once and shared	Six agents, six copies of the same CRM connection — the same retrieval paid for six times.

The direction: up before right

Why not buy more agents first

Adoption without foundation is The Danger Zone: every agent holds its own version of the company, integrations and costs are duplicated, and output reaches customers without shared rules. The move from here is up, not right — the groundwork costs a document and a meeting now, and a re-platforming later.

81%
of teams have agents past the planning stage

14%
ship with full security and IT approval

88%
report confirmed or suspected agent-related incidents

Gravitee, State of AI Agent Security 2026 (900+ executives). Adoption is outpacing control — the gap is governance, not model capability.

A 90-day roadmap, sequenced from the weakest answers

DAYS 1–30

Set the rules, name the owner

Rules that bite
Governance · scored 38
A one-page policy with three lanes — goes out untouched, needs a human look, never goes out automatically — with reviewers named by role. Log rejections from day one.

Name an owner
People · scored 47
Put the transition in exactly one senior leader's goals, with a budget line and a standing slot on the exec agenda.

DAYS 31–60

Write the truth down

One living source
Truth · scored 46
ICP, stage definitions and core messaging in a single document with an owner and a 30-minute monthly review. Retire the competing copies.

Wire it once
Connection · scored 38
One shared connection per system that every agent reads from, instead of one per agent. Fewer copies, less duplicated retrieval.

DAYS 61–90

Make it compound

Close the loop
Learning · scored 45
Add one 15-minute step to the win/loss ritual: every learning names the asset it changes, who edits it, and by when. Keep the edit log.

Bring Marketing in
Adoption · Marketing scored 20
Pick one Marketing deliverable and ship it on the Sales team's tooling until it goes out untouched 8 times in 10.

Each move is a document, a meeting, a habit — none needs new software. Re-assess at day 90 with the same statements and the same team, and measure the move up the map.

The conversation this report starts

These splits are the agenda for your facilitated session: reconcile the realities live, agree the sequence, and leave with this roadmap and named owners. Facilitated by a wysdym expert. wysdym is the operating layer for agentic GTM.
